Client:

DroidShield is a venture funded Dubai based Startup. The primary focus of this organization is to provide mobile security solutions.

Business needs

- To provide an innovative enterprise platform for managing Android-based devices.
- Implement the application with capability to provide the complete mobile security service that protects data on a phone, ensures privacy and enhances the possibility of recovering your phone.

RapidSoft's Role

Implement a reliable and robust solution on mobile, Web and back-end server.

Solution overview

The solution enables DroidShield to provide remote device management and control solution focused on Android based devices. Droid Shield delivers an end-to-end experience to allow control, security and compliance of mobile devices.

Highlights:

- User gets real time status of device
- In addition to keeping the data safe, users will be able to access them with a web browser. Anytime. Anywhere
- User can have the backup of data on server and restore to device
- User controllability for the device from web portal
- Provide Theft security
- Block the call and SMS from desired contacts
- Lets users track the current location of your phone and even plot them out on a map
- Trigger a remote wipe from the site to delete all private data on the Android phone. Contacts, messages, photos, videos including those on the removable media card can be deleted, too
